

M-relays, 2, 3 or 4 pole, 6 - 12 A

Datasheet

Application

Our general purpose relays are applied mainly in industrial and power automation systems, in signaling and protection systems and in other control and electric drives systems.

Description

The basic features of the general purpose relays are:

- Number of contacts: 2, 3 or 4
- Rated contact switching current up to 12 A, depending on relay type
- Versions with coil overvoltage suppression
- Versions with flag indicators and manual relay test pushbuttons with the possibility of latching the normal open contacts close
- Mounting sockets for 35 mm rail (EN 50022)
- Rail sockets equipped with screw terminals or spring terminals

Features

- Compact plug-in design
- 2, 3 or 4 C/O contacts
- Standard mechanical indicator
- Flat and silver relay pins for excellent connection in socket
- Wide range sockets
- Universal pinning
- Transparent cover
- Cadmium free contacts
- Flash barriers
- LED option

Benefits

- Proven reliability
- Light weight construction
- Long term availability
- Universal pinning
- Competitive pricing

Industry compliancy

- EN 60255 Relay design and environmental conditions
- EN 60947 Low voltage switch gear and control gear
- EN 60947-5-1 Electromechanical control circuit devices and switching elements
- IEC 61810 Electromechanical elementary relays
- The relays meet the requirements of the RoHS directive

M-relays

Technical specifications

Test button & LED

Universal pinning

Manual test / latching button

The test button can be used in two ways:

1. The plastic tab is broken off. In this situation, when the test button is pushed, the contacts operate, when the test button is released the contacts return to their previous state.
2. The plastic tab remains in tact. In this situation, when the test button is pushed and rotated, the contacts are latched in the operating state, and remain so until the test button is rotated back to its former position.

M-relays

Technical specifications

Contact data

Maximum make current	24 A, 20 A, 12 A
Maximum continuous current	12 A (AC1; IEC 60947)
Maximum switching voltage	250 V, 400 V
Minimum switching voltage/current AgNi	10 V / 5 mA
Material	AgNi
Contact resistance	≤100 mΩ

* AgNi/Au 0,2μm or 5 μm on request

Performance characteristics

Electrical life (AC1)	≥ 10 ⁵
Mechanical life	≥ 20 x 10 ⁶ cycles (Unpowered)
Dielectric strength	Between coil contacts 2500 VAC Contact clearance 1500 VAC Pole - pole 2500 VAC
Isolation class	C400
Max. operating frequency	At rated load 360 cycles/hour (AC1) No load 72000 cycles/hour

Mechanical data

Dimensions (d x w x h)	27.5 x 21.2 x 35.6 mm
Weight	35 g

Environment conditions

Storage temperature	-40 °C...+85 °C
Operating temperature	AC -40 °C...+55 °C DC -40 °C...+70 °C
Shock	10 g
Vibrations	5 g, 10-150 Hz
Environment protection	EN 116000-3 RTI
Degree of protection	EN 60529 IP40

M-relays

Instructions

Installation, operation, maintenance

Installation

- Install the socket and connect wiring according the identification on the terminals, plug the relay into the socket
- Reverse installation of socket is not possible due to mechanical blocking by pinning
- Do not reverse the polarity of the coilconnection when a diode is used
- Relays can be mounted tight next to each other
- Warning! Never use silicon near by relays!

Operation

- Before operate always apply voltage to coil to check correct operation
- Also switching the load a few times is advised
- Long term storage may corrode the silver on the relay pins
- By plugging the relay into the socket, the connector receivers will automatically clean the corrosion on the pins and guarantee a good connection
- Do not use the relay in places with flammable gas as the arc generated from switching could ignite gasses

Maintenance

- Correct operation of relay can easily be checked as transparent cover gives good visibility on the moving contacts
- When the relay does not appear to operate correct, please check presence of coil voltage
- Use a multimeter.
- If LED is used coil presence should be indicated, if coil voltage is present but the relay does not work, a short circuit of suppression diode is possible (The coil connection was reversed)
- If relay does not work after inspection, please replace the relay by a similar model
